To counterbalance your fluid head:

- Attach the QR plate to the camera and level the fluid head.
- Set the pan and tilt drag to zero and lock them. Set the counterbalance to the lowest level.
- Mount the camera on the platform, determine the position of the balance point, and align its center of gravity with the center of the fluid head.
- Carefully unlock the tilt lock and ensure that the camera is balanced properly. Adjust the quick release plate if necessary.
- Adjust the counterbalance knobs after balancing the camera to ensure it stays in place, regardless of the tilt angle.
- To check if your camera is properly balanced, tilt the head by 30 degrees in both directions and release it.

If the camera stays in place when released, it is balanced correctly.

However, if the camera moves upwards, it means the counterbalance is set too high and should be lowered. Similarly, if the camera moves downwards, it means the counterbalance is set too low and should be raised.

- If the camera remains stable in one direction but moves slightly in the other, it may indicate that the camera is not balanced centrally. To adjust this, slide the camera plate backwards and forwards until the camera remains stable in both directions.
- Adjust the drag according to your needs. Set it to zero for faster panning and higher for slower, steadier pan or tilt.

如何使用云台:

- 将快装板安装到相机上，然后调平液压云台。
- 水平阻尼和俯仰阻尼设置为最小并锁定，动平衡调节调到最小。
- 将相机装在云台上，确定平衡点的位置，并将其重心与液压云台的中心对齐。
- 小心地解开俯仰锁定旋钮，检查相机是否平衡到位。如果没有，前后调节快装板，直到平衡为止。
- 相机基本平衡后，调整动平衡旋钮，调到合适的档位，调整到，俯仰无论在什么角度，都能保持悬停，即可完成平衡调节。
- 应根据您的情况和需要设置相应的阻力。如果需要更快地平移，则将阻力设为零。如果需要缓慢或稳定的计划或倾斜，则将阻力调大一些。
